

DOCUMENTS

CHAINS

MEASURED, NOT APPLIED TO THE RELEASED SUBSTRATE

node merge (cosine ≥ 0.88 and Jaccard ≥ 0.05) would remove 2,385 nodes and manufacture a centrality super-hub;
similarity edges (cosine ≥ 0.80) join documents but enter no chain reported here.
Both are costed in the use-case section. The node inventory above is the un-merged count.
